Maplin Product Display Wireframes v4.2.2

Created by Shain McAlindon 9th September 2016

About this document

This is an annotated set of wireframes for the Maplin Product Display v4. They are meant to communicate the user flow, functionality and layout of the product displays to be used throughout the new stores. They will also be used to create visuals assets (fonts, colours and other visual assets) before being built.

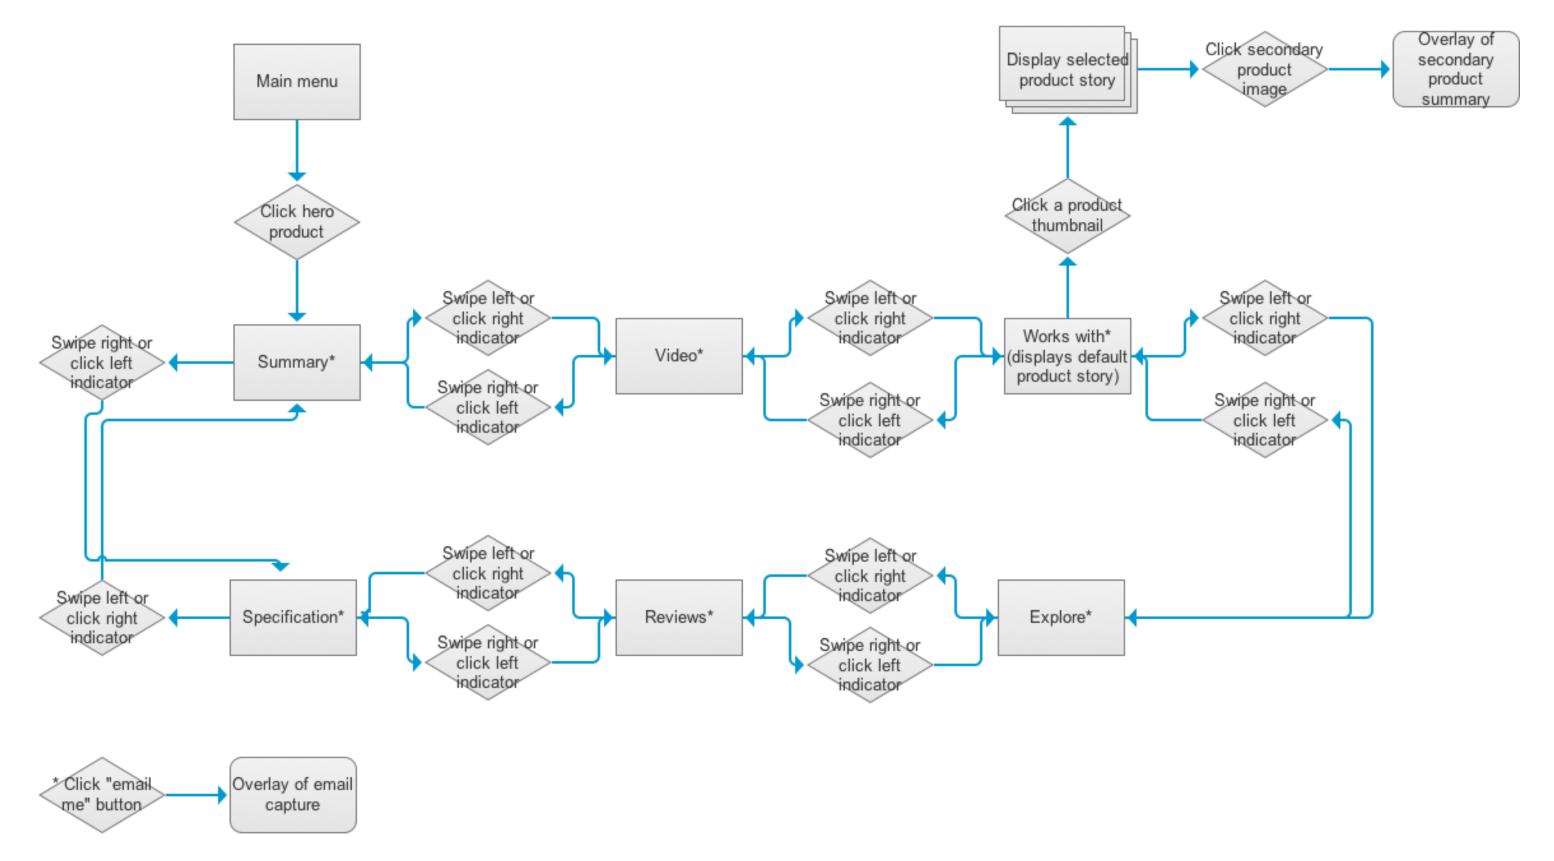

The wireframes are designed to work on a 10" landscape device, 1024x768px.

User flow

* Clicking a link within the navigation will jump the user to the relative page

maplin

SAVE £6.00 Works on a shelf, table or any clean, flat surface Example Product Title for Product 5 £199.00 Example, top line, benefit text for roduct 5

Main menu

Data layers

4

2

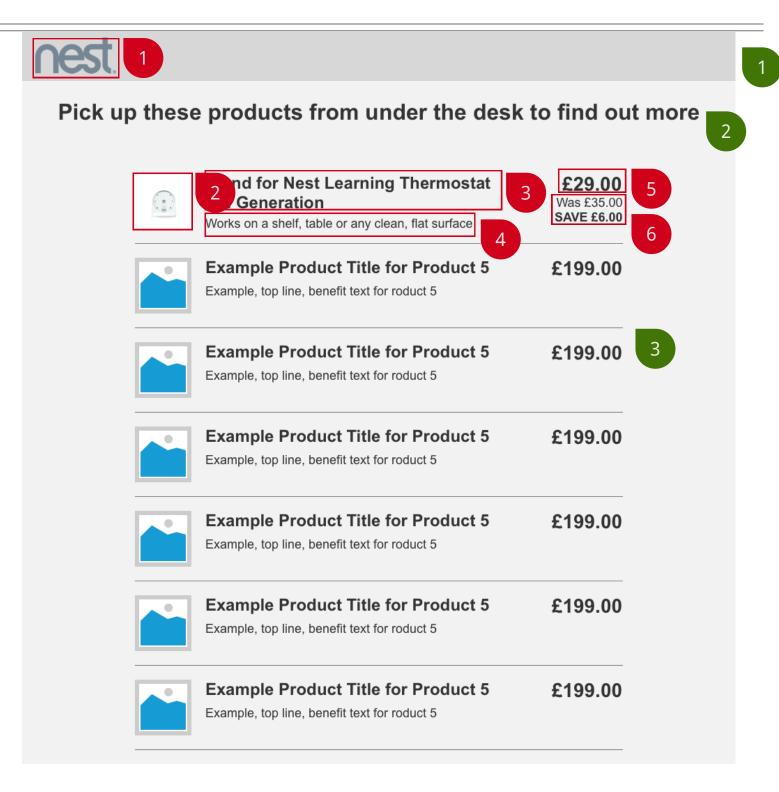

- 1. BL1: Brand logo
- 2. IM1: Image
- PT1: Product title 3.
- TLB1: Top line benefit 4.
- 5. R1: Rating
- PP1: Price 6.
- 7. WS1: Was/save

Functionality

- 1. Each product can be clicked to access more in depth information for that
- 2. The information should not drop below the screen height, or push the and down to view more of the hero product information.
- 3. "More information" link was noticed, but not used during testing, with users preferring to click on the image. "More information" has been moved to overlay the image.
- 4. Maximum number of hero products shown on the main menu will be 4 per device. As the number of products decreases, the spacing and aligment will change.
- 5. Extended range will be available from the main menu, appearing underneath the "hero" products. These can be scrolled to, or clicking this link will anchor the user with a linear animation.
- 6. After a period of inactivity (TBD) the user journey will reset to the Main menu.

product. On click, the focus state should communicate this action to the user.

extended range button out of view. We don't want the user to have to scroll up

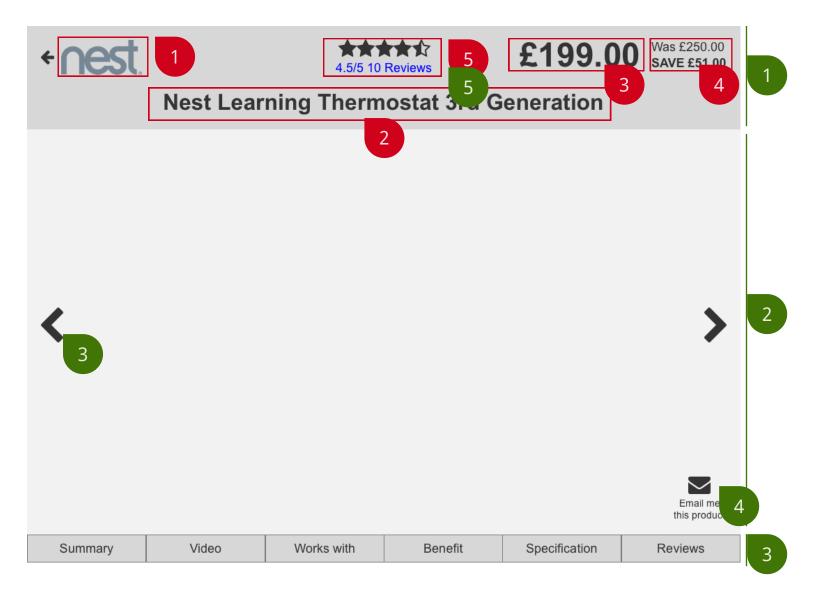

Main menu: Extended range

Data layers

- 1. BL1: Brand logo
- LIM1: Lower image thumbs 2.
- 3. PT1: Product title
- TLB1: Top line benefit 4.
- 5. 6. PP1: Price
- 6. 7. WS1: Was/save

Functionality

- 1. To keep the branding visible at all times, on scroll of the main menu, once the brand logo is out of view, a fixed header will be visible with a smaller brand logo within it.
- 2. A title will act as the call to action for the extended range products. Call to action text TBD.
- 3. Products within the extended range will appear as a list. These will show image, title, benefit text, price (was and save where applicable).
- 4. Products within the extended range should look different to the "hero" products as they are not clickable and we want to manage user expectations.

Template

Data layers

- 1. BL1: Brand logo
- PT1: Product title 2.
- 3. PP1: Price
- WS1: Was/save 4.
- 5. R1: Rating

Functionality

- 1. Header: Fixed header.
- 2. Content: Content will be scrollable up and down where applicable.
- 3. There are 3 forms of navigation betwen content pages: swiping left & right or in the footer will take you direct to that page. The footer navigation will be fixed.
- 4. Email call to action: Clicking this will allow the user to enter name, email and opt into the maplin newsletter. Submission of the form will send an email to the captured address with a weblink to the product.
- 5. Clicking reviews will navigate the user to review page.
- 6. Navigating between pages will invoke a slide animation to promote the use of the swipe getures.
- 7. The footer will reflect the content being shown. This will signify to the user where they are if they happen to get lost in the navigation.
- 8. The swipe gesture should only trigger an event when within the content area, not on the header or footer.
- 9. Swiping left or clicking on the right chevron whilst viewing the last page will go to the first page. Likewise swiping right or clicking the left chevron whilst viewing the first page will got to the last page.

clicking a chevron will take you to the next page in the sequence, clicking a link

Template: Email capture

Functionality

- 1. Clicking the "Email me" button will open an overlay to capture name, email and newsletter preference.
- 2. If we automatically focus on the first field, we can open the keyboard by default and remove a user interaction.
- 3. By default, the submit button should be disabled.
- 4. Clicking a disabled submit button will feedback to the user with prompts on how to complete the form. We can repurpose the label space for this by reffering to the label name in any error copy.
- 5. Once a field is complete, offer visual feedback, once the form is complete, allow the submit butto nto be enabled.

Data layers

- 1. IM1: Image
- WW1: Header 2.
- WW2: Body paragraph 3.
- WW3: Lower title 4.
- PT1: Product title 5.
- TLB1: Top line benefit 6.
- 7. SUMT1: Body paragraph
- BUL1: Bullets 3-5 8.
- 9. QU1: Quote title
- 10. QU2: Quote body
- 11. QU3: Quote name

Functionality

- 1. On page load the user will see a promoted relationship with another product. This will show images of the products that work together, with a story on those related products.
- 2. This, along with other products that work with this product will be listed underneath as thumbnails. Maximum of 8.
- 3. Clicking one of these will select this product and change the image and story to one that references the newly selected product.
- 4. These thumbnails will have a selected state to communicate to the user which relationship they are viewing.
- 5. Clicking the secondary image will invoke an overlay with top level product information. Clicking off the overlay or the close icon will close it.
- 6. The overlay will be fixed height, with the ability to scroll within it.

maplin

When products work with Nest, you don't have to worry about telling them how to connect, or what to do. They just work. Nest works with all kinds of things, like lights,
